| SWTA21 | Toploader | NetMaster™ Fully Programmable |

Improved Out-of-Balance System

Speed Queen's unique Automatic Balance System (ABS) provides the industry's best out-of-balance handling. The liquid-filled balance ring at the top of the tub, coupled with the new innovative suspension system, means that machines complete wash cycles without interruption, eliminating not only unfinished wash cycles and unnecessary service calls, but the need for an out-of-balance switch, as well.

Durable Stainless Steel Tub

Keep your customers' clothes looking their best longer. Speed Queen's exclusive stainless steel tub actually becomes smoother with each use, so it won't pill, snag or fray clothes. Stainless steel won't corrode, chip, crack or pit with normal use and it's extremely rust resistant.

Water Fill System

Our new water fill system enables water to flow all the way around the tub as it enters the washer, so that even the most overstuffed loads receive a better wetdown and a better spray rinse. Even oversized loads can get their cleanest!

High Security System

Breaking into Speed Queen's Strong Box™ metercase and coin vault requires more time, energy, and noise than most vandals care to risk. Speed Queen washers are constructed of solid, reinforced steel for greater strength and rigidity to deter acts of vandalism. Our innovative meter case design, with a double-wrapped steel front, makes it twice as hard to break into. A sturdy steel plate and heavy-duty bolts reinforce the security of the metercase to the washer top.

100% Front Serviceability

Simple removal of front panel or control hood provides easy access for servicing from installed position, saving you time and money.

Faster Spin Speed

At 710 RPM our topload washer's spin speed is among the highest in the industry. The amount of moisture left in clothes will be far less than other slower-spinning models, resulting in a significant reduction in energy usage—that results in faster customer turnover and higher profits.

Water & Energy Efficiency

Designed to save you money, Speed Queen's adjustable water level control gives owners the flexibility to choose water wash/rinse levels to meet the needs of various locations. A simple adjustment behind the control panel enables owners to select from three efficient water level settings. This feature is accessible to owners only.

Topload Washer Specifications

Control Options

SWTA21

Fully programmable NetMaster™ EDC control

SWTX21

Micro-DISPLAY control (MDC)

SWT911

Mechanical control

Our advanced NetMaster™ and Micro-DISPLAY Control (MDC) makes it easy for customers to locate the vend price, cycle selections, cycle status, and remaining cycle time. Customers will appreciate knowing the status of their laundry and the ability to be more efficient with their time.

Our electro-mechanical control offers water temperature and fabric selector options, along with cycle cue lights that show the user what stage of the wash cycle the washer is in.

Activation Options
